

# Service Engineer

## ■ Electron Microscopes

Renowned for its leading brands, technical expertise and commitment to continuous innovation within the research and development sectors, this company is a market leader with a focus on anticipating the market needs. Due to their continual growth, in New Zealand, a dedicated and passionate Service Engineer is now sought to join their technical service team.

Your key focus will be installations, service, technical support and repairs and maintenance of a range of Electron Microscope and Focussed Ion Beam Systems across New Zealand. You are able to work both independently in the field and as a contributing member of the technical team. With strong communication and interpersonal skills you have the ability to provide technical service and advice to client queries.

With previous experience in a similar field you possess excellent technical and troubleshooting skills and understand the importance of providing exceptional customer service and are driven to continuously learn new skills and keep your product knowledge up to date. Ideally, you have completed a science, physics or engineering related degree.

Not only is this a great opportunity to join an industry leader you will have the opportunity to travel extensively within New Zealand and Australia, along with future product training in Europe. You will be rewarded with an exciting role that offers an attractive package, including company car. A current Driver's License is essential.
